

Starting from the bottom, a lot of time was spent on the tail leading to CON-55, accomplishing work that was very important, but not necessarily “critical” per se, when considering the primary goal of the project, and 1 of its key constituents, which is to provide the scheduling functionality for some bot/program to run on some user’s device. Getting 1 such instance working puts all types of features on the tail, including issues like CON-78 to the side, however all tail features incorporate beautifully when integrated with the pure functionality provided by the critical path, moreover, extending the application to serve multiple schedules in an approachable manner. Note that dotted lines are simply subtask dependencies, while solid lines are our network.
