Above is the burndown chart for sprint 2, you can see the tasks that were completed and the story points allocated to them. At first progress stalled, as we were prioritizing completing certain user stories first, and then the remaining user stories were completed at a faster rate, as you can see from the red line. Below is the burndown chart for sprint 1, to compare the progress between the two sprints.

Comparing the velocity between sprint 1 and sprint 2, you can see sprint 1 was completed at a faster pace, even though there were more story points in sprint 1. This was due to more complicated user stories in sprint 2, with more learning and knowledge required.
