

# Sprint 4 Burndown Chart

Above is the burndown chart for sprint 4. As we learned tech for downloading and uploading bots in sprint 3, we were able to complete the related sprints to downloading and uploading in the beginning of the sprint making the chart go down. After that, we took on the highest priority issues which were time-intensive making the chart be constant for a period of time. After finishing few of the priority issues, we were able to make progress and complete some less valued issues in the end.

As sprint 2 issues were left in the beginning, we completed those first which increased the completed points on the histogram and as sprint 4 is the most complex part, it took time to complete issues with highest priority but were able to complete significant number of issues.
